

SONCELL NA

Generation II

Fleet Wiring Solutions

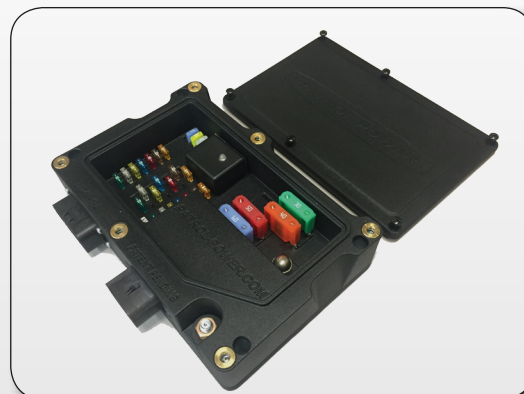

Informational Sheet

The Next Generation Is Here!

Building upon the success of the original Patrol Power design, Patrol Power is leading the market once again. The second generation power distribution module maintains all of the features of the Generation I while improving fleet management flexibility and adding several new innovations. The fuse block module has been dramatically downsized, is fully integrated and weatherized for under the hood installation. The timer module is smaller and socketed simplifying timer configuration and service. Dual power harnesses simplify wire management reducing installation time. **Additionally, the detachable harness allows the end user to reuse the fuse block module when replacing vehicles, even if they are of different makes and models.** While the new harness is universal by design, vehicle specific mounting brackets are available for all popular law enforcement vehicles.

Product Features:

- Reduces Installation Time and Service Costs
- Fuse Block Module is 50% Smaller Than The First Generation
- Fully Integrated Design with 100% Machine Crimped Contacts for Superior Ruggedness and Reliability
- Designed for the Extreme Under the Hood Environment
- Change Between Timed or Constant On Outputs by Simply Moving Fuse Locations
- 4 High Current (50A max) and 21 Standard Current (30A max) Circuits
- Detachable Cable Assembly
- Sealed Automotive Grade Connectors
- 4-Layer, 4 oz, Copper Printed Circuit Board for Maximum Reliability, High Current Capacity, Minimum Resistance and Low Self-Heating
- Plug in Programmable Timer
- Integrated Siren Mute
- Built in 180-Amp Timer Controlled Relay
- Wiring Harness Exclusively Uses GXL Cross-Link High Temperature Wire
